Professional Summary

Dedicated Software Developer (B.E. 2023) with 1+ year of intensive technical training. Proven ability to deliver full-stack applications using ASP.NET MVC, React.js, and Firebase. Specialized in AI-Augmented Development to accelerate prototyping.

Technical Skills

Languages: C#, Java, JavaScript (ES6+), HTML5, CSS3, MySQL & NoSQL
Frameworks: ASP.NET MVC, React.js, Next.js, Bootstrap, Tailwind
Cloud/DB: Firebase (Auth, Firestore), SQL Server, REST APIs
Tools: Git, VS Code, Cursor, Copilot

Professional Experience

Independent Full-Stack Developer, Self-Employed / Freelance Present | Remote

- Focusing on .NET architectures and AI-workflows.
- Built proprietary component libraries and modern deployment pipelines.
- Key Project 1: High-Performance Architectural Portfolio Platform (Jun 2024 - Aug 2024)**
 - Developed a high-performance Next.js portfolio platform for an architecture firm, integrating Headless CMS APIs to enable dynamic, self-managed portfolio updates.
 - Engineered a custom image optimization pipeline (WebP/AVIF formats, lazy loading), boosting page speed to achieve a 95+ Lighthouse Performance Score for media-heavy architectural renderings.
 - Built secure, server-side API routes to process client inquiries and automate SMTP-based email notifications safely.
 - Designed a pixel-perfect responsive UI and established automated CI/CD pipelines via Vercel to ensure seamless cross-device compatibility and rapid deployment cycles.
- Key Project 2: Rupiece – Prop-Trading & Evaluation Platform (Aug 2025 – Mar 2026)**
 - Architected a custom simulated order execution engine in Python/FastAPI utilizing asynchronous event loops (asyncio) to handle multi-contract margin calculations, cost-averaging, and trade execution.
 - Engineered a real-time risk monitoring engine with a 2-sample breach validation rule (over 90 seconds) to calculate daily/absolute drawdown thresholds, reducing false liquidations by 95% during market volatility.
 - Automated daily brokerage session creation by building a headless browser bot with Playwright/Selenium that auto-renews OAuth tokens every morning, securing 100% operational uptime.
 - Developed a responsive web dashboard using Next.js 16 (React 19), Tailwind CSS, and Framer Motion, integrating Razorpay payment APIs and Recharts to plot live equity and performance curves.
 - Created a lightweight Vite + React PWA terminal powered by client-side WebSockets to deliver sub-100ms updates, enabling mobile-friendly trade management and live Stop-Loss/Take-Profit adjustments.

Image Processing Deep Neural Network (DNN) Development | Freelance Project for PhD Research Staff 09/2024 – 12/2025

- Designed and implemented a Deep Neural Network architecture consisting of an input layer, three hidden layers, and an output layer for multi-class digit classification.
- Utilized the MNIST handwritten digit dataset containing grayscale images for training and testing the neural network model.
- Developed Python-based scripts for data preprocessing, normalization, and dataset management to improve training efficiency and model performance.
- Achieved 95.6% classification accuracy on the test dataset through architecture tuning and parameter optimization.
- Frontend Developer (Internship) | BRIGHT SERVICES — On-site | Sep 2023 – May 2024 (9 mos)**
 - Built and maintained responsive user interfaces using React.js, Tailwind CSS, and Bootstrap to translate Figma mockups into interactive web pages.
 - Collaborated with backend engineers to integrate RESTful API endpoints, ensuring seamless data flow and dynamic state rendering.
 - Optimized website performance and mobile responsiveness by debugging and refactoring legacy CSS/JavaScript (ES6+) code.
 - Participated in Agile sprint cycles and on-site stand-ups to deliver weekly feature updates and fix UI/UX issues.

Academic Projects

- Real-Time Forex Exchange App, ASP.NET MVC, C#, REST API
- Designed and deployed a Live Forex Rate Monitor web application leveraging C#, ASP.NET MVC, and RESTful APIs.
 - Architected a client integration layer to consume real-time market data feeds asynchronously, handling complex external API responses.
 - Implemented background scheduling tasks to fetch and cache exchange rate updates, significantly reducing network overhead and API call latency.
 - Built an interactive user interface displaying live currency tracking graphs and exchange tools, enhancing overall user experience and analytics.
 - Developed and deployed a live financial dashboard to monitor and convert foreign exchange rates with real-time updates.

Education

B.E. Electronics and Communication Engineering, K Ramakrishnan College of Engineering 2019 – 2023
Higher Secondary (HSC) - Percentage: 72.16%, Annai Higher Secondary School 2018 – 2019
Secondary School (SSLC) - Percentage: 95.6%, Annai Higher Secondary School 2016 – 2017

TRAINING & CERTIFICATIONS

Certified Cloud App Developer - TNSDC, Advanced Full-Stack Engineering - Self-Directed (C#, MVC), Problem Solving (Java) - HackerRank, Software Engineering Intern- HackerRank, SQL (advanced) - HacerRank

Declaration
